GENERAL INFORMATION:
APPLICANT: William Craig Moore
APPLICANT: Tyrell E. No. 6265560ris
APPLICANT: David Shay Silberstein
TITLE OF INVENTION: HUMAN STE20-LIKE STRESS ACT
TITLE OF INVENTION: SERINE/THREONINE KINASE
FILE REFERENCE: PHM. 70272
CURRENT APPLICATION NUMBER: US/09/152,406
CURRENT FILING DATE: 1998-09-14
EARLIER APPLICATION UNMBER: 9719920.2
EARLIER APPLICATION UNMBER: 9719920.2
EARLIER FILING DATE: 1997-09-19
NUMBER OF SEO ID NOS: 9
                                                                         SD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 11

Sequence 4, Application US/09211930

Patent No. 5962265:
GENERAL INFORMATION:
APPLICANT: Tyrell E. No. 5962265ris
APPLICANT: William Craig Moore
APPLICANT: David Shay Silberstein
TITLE OF INVENTION: HUMAN SIGNAL TRANSDUCTION
TITLE OF INVENTION: SERINE/THREONINE KINASE
FILE REFERENCE: PHM. 70296

CURRENT APPLICATION NUMBER: US/09/211,930
CURRENT FILING DATE: 1998-12-15
CURRENT FILING DATE: 1998-12-15
COURTER APPLICATION NUMBER: US/09/211,930
                                                                                                                                                                                                                                                                                             EARLIER APPLICATION NUMBER: GB 9726851.0
EARLIER FILING DATE: 1997-12-19
NUMBER OF SEQ ID NOS: 14
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 4
LENGTH: 426
TYPE: PRT
ORGANISM: Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents rat TAO2 protein kinase, which is capable of phosphorylating MEK3 (a MAP/ERK kinase). TAO kinases, and related polypeptides, are used to screen for modulators of stress-responsive mitogen activated protein (MAP) kinase pathways. These modulators are potentially useful for treating or preventing: (1) inflammation, and uncommune disease, cancer and degeneration (inhibitors of phosphorylation); or (2) insulin-resistant diabetes, metabolic disorders and neurodegeneration (enhancers of phosphorylation). TAO kinases are also used to raise specific antibodies, useful therapeutically as modulators and as immunoassay reagents for detecting TAO kinases.

TAO kinase polynucleotides can be used: (a) for recombinant expression of TAO kinases; and (b) in the form of fragments, for detecting TAO kinases are highly specific for MEK3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                                                                                                                                antipsoriatic; antiparkinsonian; nootropic; neuroprotective; costeopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; cosqulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allocations and present allocation disorders, asthma, burner is considered.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel human kinase proteins (PKIN) and nucleic acid molecules encoding them. PKIN is useful for identifying compounds that modulates its activity. PKIN cDNA is useful for assessing toxicity of a test compound. PKIN and its cDNA are useful for diagnosis, prevention and treatment of immune disorders such as acquired immune deficiency syndrome (AIDS), Addison's disease, anaen adult respiratory distress syndrome, allergies, amyloidosis, psoriae adult respiratory distress syndrome, allergies, amyloidosis, psoriae
                                                                                                                              Human
                                                                                                                                                                                                                                       AAW97677 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                protein associated with signal transduction. KDS2 has a Ck kinase domain related to that of Ste20 (KDS1 = Kinase Domain CC related to Ste20). KDS2 cDNA (see AAX07075) was isolated from a CC human bone marrow cDNA library. A clone (see AAX07074) encoding the highly homologous KDS1 (see AAW97676) was also obtained. Both KDS1 cand KDS2 have Glu/Gln-rich regions at their C-terminus (see also CC AAW97678-79) suggesting an alpha-helical structure that may play a crole in covalently localising these proteins to a specific site within the cells, which may be necessary for function. A method CC within the cells, which may be necessary for successed such as since CC within the cells, which may be necessary for successed such as since CC within the cells, which may be necessary for successed such as signal CC transduction pathways. These pathways may regulate cytoskeleton, can secretion, growth, apoptosis, superoxide generation, and specific contents of the company of the compa

                                                                                                                                                                                                                                                                                                                                                                     phosphorylation); or (2) insulin resistant diabetes, metabolic disorded and neurodegeneration (enhancers of phosphorylation). TAO kinases are also used to raise specific antibodies, useful therapeutically as modulators and as immunoassay reagents for detecting TAO kinases. TAO kinases polynucleotides can be used: (a) for recombinant expression of TAO kinases; and (b) in the form of fragments, for detecting TAO kinases; and (b) in the form of fragments, for detecting TAO kinases; and (b) in the form of fragments, for detecting TAO kinase polynucleotides in standard hybridisation and amplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents rat TAO1 protein kinase, which is cape of phosphorylating MEK3 (a MAP/ERK kinase). TAO kinases, and related polypeptides, are used to screen for modulators of stress-responsive mitogen activated protein (MAP) kinase pathways. These modulators are potentially useful for treating or preventing: (1) inflammation, autoimmune disease, cancer and degeneration (inhibitors of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TAO1; TAO2; MEK3; mitogen activated protein kinase; phosphorylation; p38; protein kinase; cancer; inflammation; autoimmune disease; degeneration; insulin-resistant diabetes; metabolic disorder; neurodegeneration; MAP kinase; MAP/ERK kinase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        B
This sequence represents a consensus peptide sequence conained in novel STE20-related protein kinases. The invention relates to a nucleic acid molecule encoding a kinase polypeptide selected from STLK2, STLK3, STLK4, STLK5, STLK6, STLK7, ZC1, ZC2, ZC3, ZC4, KHS2, SULU1, SULU3, GEK2, PAK4 and PAK5. The proteins are used to identify agonists and antagonists, and to raise antibodies. The polynucleotides are useful in gene therapy protocols. The polynucleotides, polypeptides, antibodies, antagonists and agonists may be used to treat diseases such as immune-related disorders and diseases (e.g. rheumatoid arthritis, artherosclerosis, chronic inflammatory bowel disease (e.g. Crohn's disease), asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          neuroprotective; cardiant; cerebroprotective; cytostatic; antidiabetic; vulnery; STE20; protein kinase; STLK2; STLK3; STLK4; STLK5; STLK6; STLK6; STLK7 ZC1; ZC2; ZC3; ZC4; KHS2; SULU1; SULU3; GEK2; PAK4; PAK5; antagonist; antibody; gene therapy; rheumatoid arthritis; artherosclerosis; asthma; inflammatory bowel disease; Crohn's disease; osteoarthritis; psoriasis; rhinitis; autoimmunity; organ transplantation; multiple sclerosis; rhinitis; autoimmunity; organ transplantation; multiple sclerosis; myocardial infarction; cardiovascular disease; stroke; renal failure;

These were isolated from expressed sequences tags (ESTs). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. parkinson's disease. The present sequence is a protein of the invention.

                                                                               В
                                                                                                                   QΥ
                                                                                                                                                                                                                                              cc invention relates to nucleic acid molecule encoding a kinase polypeptide cselected from STLK2, STLK3, STLK4, STLK5, STLK6, STLK7, ZC1, ZC2, ZC3, CC24, KHS2, STLU1, SULU3, GEKZ, PAK4 and PAK5. The proteins are used to cc identify agonists and antagonists, and to raise antibodies. The collectides are useful in gene therapy protocols. The polypucleotides, antibodies, antagonists and agonists may be used to treat clientees such as immune-related disorders and diseases (e.g. rheumatoid arthritis, artherosclerosis, chronic inflammatory bowel disease (e.g. ccoln's disease), asthma, osteoarthritis, psoriasis, atherosclerosis, cronic inflammatory bowel disease (e.g. crinitis, autoimmunity, and organ transplantation, chronic inflammatory clientees (e.g. crinitis, autoimmunity, and organ transplantation, myocardial infarction, cardiovascular disease, stroke, renal failure, oxidative cstress-related neurodegenerative disorders (e.g. amylotrophic lateral cc stress-related neurodegenerative disorders (e.g. amylotrophic lateral cc sclerosis, parkinson's disease and Leigh syndrome), cancer, cardiovascular disorders, inflammatory disorders, diabetes cardiomyopathies, ischemic disorders, inflammatory disorders, diabetes cuseful for cell growth regulation (e.g. in wound healing), T cell cardiovation, mitosis control, and as immunosuppressants
                                                                                                                                                                 Matches
                                                                                                                                                                                    Query Match

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames I to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; lmmunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antianaemic; gene therapy; cancer; proliferative disorder; hypertension; neurodegenerative disorder; osteoarthritis; graft vs host disease; cardiovascular disease; diabetes mellitus; hypothyroidism; SCID; AIDS; cholesterol ester storage; systemic lupus erythematosus; infection; severe combined immunodeficiency; malaria; autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal haemoglobinuria; burn; wound; bone damage; cartilage damage; antiinflammatory disease; coagulation;

The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This polypeptide comprises human serine/threonine kinase KDS1, a novel protein associated with signal transduction. KDS1 has a kinase domain related to that of Ste20 (KDS1 = Kinase Domain related to Ste20). KDS1 cDNA (see AAX07074) was isolated from a human bone marrow cDNA library. A clone (see AAX07075) encoding the highly homologous KDS2 (see AAW97677), was also obtained. Both KDS1 and KDS2 have Glu/Gln-rich regions at their c-terminus (see also AAW97678-79) suggesting an alpha-helical structure that may play a role in covalently localising these proteins to a specific site within the cells, which may be necessary for function. A method for producing KDS polypeptides in host cells is provided. Since KDS molecules have kinase activity, they are useful as modulating agents in regulating a variety of cellular processes such as signal transduction pathways. These pathways may regulate cytoskeleton, secretion, growth, apoptosis, superoxide generation, and specific gene transcription. KDS polypeptides and polynucleotides can be used for treating disorders involving aberrant expression of diamonalian KDS genes. They can also be used for detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

It is expressed in reproductive, haematopoletic/immune and nervous tissues and is found to be homologous to serine/threonine protein kinase. Fragments of CSIGP encoding nucleic acid can be used as hybridisation probe for detecting CSIGP related sequences or allelic variants. Recombinant CSIGP can be produced in host cells by transforming them with genetically engineered vectors. Agonists or antagonists can be used in the treatment of cell proliferative and inflammatory disorders associated with decreased or increased CSIGP expression. CSIGP is used in the diagnosis, prevention and treatment of cell proliferative alsorders like arteriosclerosis, cirrhosis, cancer, hepatitis and inflammatory disorders like arteriosclerosis, cirrhosis, cancer, hepatitis errosis, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human cell signaling proteins useful for, proliferative and inflammatory disorders

cardiomyopathies, ischemic disorders, rurrummuss, end also mellitus, fibrotic and mesangial disorders. The proteins may also useful for cell growth regulation (e.g. in wound healing), T cell activation, mitosis control, and as immunosuppressants.
                                                                                                                           Crohn's disease), asthma, osteoarthritis, psoriasis, atherosclerosis, rhinitis, autoimmunity, and organ transplantation, chronic inflammatory pelvic disease, multiple sclerosis, organ transplantation, myocardial infarction, cardiovascular disease, stroke, renal failure, oxidative stress related neurodegenerative disorders (e.g. amylotrophic lateral sclerosis, Parkinson's disease and Leigh sundrama
                                                                                                                                                                                                                                                                                                                        invention relates to nucleic acid molecule encoding a kinase polypeptide selected from STLK2, STLK3, STLK4, STLK5, STLK6, STLK7, ZC1, ZC2, ZC3, ZC4, KHS2, SULU1, SULU3, GEK2, PAK4 and PAK5. The proteins are used to identify agonists and antagonists, and to raise antibodies. The polynucleotides are useful in gene therapy protocols. The polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antipsoriatic; antiarteriosclerotic; antiasthmatic; immunosupressive; neuroprotective; cardiant; cerebroprotective; cytostatic; antidabetic; vulnery; STE20; protein kinase; STIK2; STIK3; STIK4; STIK5; STIK5; STIK7; ZC1; ZC2; ZC3; ZC4; KHS2; STIU1]; SULU3; GEK2; PAK4; PAK5; antagonist; antibody; gene therapy; rheumatoid arthritis; artherosclerosis; asthma; inflammatory bowel disease; crohn's disease; osteoarthritis; psoriasis; rhinitis; autoimmunity; organ transplantation; multiple sclerosis; myocardial infarction; cardiovascular disease; stroke; renal failure; oxidative stress-related neurodegenerative disorder; Parkinson's disease; oxidative stress-related neurodegenerative disorder; Parkinson's disease;

autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease and amylotrophic lateral sclerosis, infections caused by bacteria, viruses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      17 - NOV
                                                        The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include
                                                                                                                                        New isolated nucleic acid encod preventing, treating or amelior food additives or preservatives
                                                                                                                                                                                                                                                                                                                                                                                                                                       17-NOV-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    17-NOV-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG175) and the encoded proteins

disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes and pituitary dwarfism, cancers and disorders at the cellular level e.g. leukaemia, disorders involving nevvascularisation e.g. malignancies, respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. acute kidney failure and blood related disorders e.g. myocardial infarction. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein,
